

Light Fantastic

One Lincoln business is using lasers to make available a whole range of health and beauty treatments. Safe, effective and cutting edge, we find out a little more about the stunning technology and expertise behind the aesthetic medical treatments available at Lincoln Laser Skincare...

Light truly is fantastic, when it's power is harnessed by Nurse Specialists Julian and Deborah Kessler.

The husband and wife team opened in Lincoln three and a half years ago to provide cutting-edge treatments in the field of aesthetic medicine and skin-care, and their business has gone from strength to strength ever since.

Now, a new machine enables them to provide an even greater breadth of service, as the clinic can provide fast and effective tattoo removal, as well as hair removal, treatment of fine lines & wrinkles, rosacea, warts & skin tags and acne & sun damage treatment.

"We've added a new machine to our existing complement of two laser and Intense Pulsed Light systems," says Julian. "The machines all work with a different wavelength of light depending on their intended use, but they're all incredibly effective."

Tattoo Removal

The removal of unwanted tattoos is the company's newest service. In just 10-15 minutes per treatment, over anywhere from two to eight treatments, most tattoos can be removed completely.

A special frequency of light — from the company's new Asclepion medical grade Q-switch ruby laser — penetrates the skin to shatter the pigment, which is then safely

removed via the body's lymphatic system. "We're the only provider of the treatment in Lincoln — perhaps in Lincolnshire — says Julian. "It's already proving really popular with clients."

Anti-Ageing Treatments

The clinic's lasers can also be used to provide permanent, hair reduction on the face and body, and can be used to reduce lines and wrinkles as part of broader anti-ageing treatments.

This can include the firm's new range of cosmeceuticals; cosmetics which are tailored to the patient following a medical consultation, and which contain high concentrations of active ingredients, some of which require prescriptions.

Injectable Procedures

With Dr Nikki Osborne, a qualified GP and member of the British Association of Cosmetic Doctors, now working at the clinic, Lincoln Laser Skincare can also offer dermal filler and wrinkle-reducing treatment using products such as BOTOX. These are typically used as anti-ageing treatments but can also be used to treat excessive sweating, known as hyperhidrosis.

"We're keen to stress that all of our treatments are individualised," says Nikki. "Because we all come from a medical background, we take a medical approach to skincare, rather than a commercial one.

We're registered with the Care Quality

Lincoln Laser Skincare

Treatments: Using three different lasers and an IPL device, the company can treat sun and acne damage, skin pigmentation problems, skin tags and vascular skin problems, and provide effective hair removal.

What's new? The company's newest machine facilitates effective and fast tattoo removal, and now, Lincoln Laser Skincare provides aesthetic medicine such as dermal fillers and cosmeceuticals products too. These are both non-prescription and prescription-strength beauty products for a really effective anti-aging regime.

Commission, and the British Medical Laser Association, and always insist on a full consultation — which is free for tattoo removal — and will only proceed with a treatment if we feel it's appropriate."

With treatments that are unique in the county, and a range of products that can be used at home too, to enhance the clinic's treatments, it's easy to be impressed by the technology and products on offer, but just as easy to forget that at the heart of the clinic's treatments is just a beam of light.

"Light can be deceptively powerful," says Julian. "But it can certainly provide some impressive results. Pain-free, permanent, quick and easy, it's no surprise to us that people are discovering a better way to boost their confidence and make a difference to their quality of life." ■
